EXPERIENCE

Bloomberg LP

New York, NY

Software Engineer

Bloomberg Fixed Income Indices

Feb 2026 - Present

- Proposed, designed, and developed a Kafka-based system to replay internal service requests from production to staging environments with ~30 ms latency; enabling early validation runs that let operations sign off on index data 1 hour earlier than before
- Leading a 3 person team to develop a web-based tool to dynamically construct index calculation DAGs on demand, replacing sequential runs with a dependency-aware parallel execution model
- Own the Python backend service and React (React Flow) frontend for the index calculation platform supporting concurrent computation of up to 35k+ securities across 1k+ indices

Bloomberg Data License

Aug 2023 - Feb 2026

- Led a zero-downtime migration of 2.5 PB of critical financial data between internal S3-compliant cloud storage systems
- Designed and implemented a dual-write architecture for internal microservices to keep two independent cloud storage systems in sync during migration with no client-facing downtime
- Coordinated with 15 stakeholder teams to manage reader/writer migrations; presented progress and risks to senior management through custom-built tooling and dashboards
- Won an org-wide hackathon for developing a full-stack internal tool using React and FastAPI to enable safe, reversible deletion of client-facing data
- Productionized the client data deletion tool, replacing risky, irreversible ad-hoc scripts used for recurring data-fix requests (~5/month)

Institute on Taxation and Economic Policy (ITEP)

Washington, D.C.

Model Development Intern

June 2022 - Aug 2022

- Implemented end-to-end workflows for a web-based tax simulation platform, enabling analysts to construct and run custom queries against a database of 100M+ household records
- Improved query performance through SQL refactoring, read replicas, and Redis caching, cutting worst-case query times from >1 min to ~10 secs

Northrop Grumman

Baltimore, MD

Software Engineering Co-op

Aug 2020 - May 2021

- Developed a Python control interface for a flight-test signal emitter, integrating with software-defined radios through custom communication protocols
- Optimized signal processing pipelines using multiprocessing and asyncio, reducing application startup time from ~1 min to ~20 secs

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Lua, SQL

Infrastructure: Kafka, Redis, Postgres, AWS S3, Docker

Frameworks & Tools: Django, Flask, FastAPI, React, Angular, Git, Jira, Grafana, Humio, Splunk

EDUCATION

Bucknell University

Lewisburg, PA

Master of Science in Electrical Engineering, GPA 3.9

Aug 2021 - May 2023

Bachelor of Science in Computer Engineering, GPA 3.6

Aug 2017 - May 2021

| **Honors:** Cum Laude, Dean's List, Bison Award for Leadership & Excellence
